

THAKOR KIRANKUMAR

Software Developer | React.js | Next.js | Node.js | TypeScript
Ahmedabad, India | +91 9909337763 | thakorkiran1012003@gmail.com | [LinkedIn](#)

CAREER OBJECTIVE

Results-driven **Full-Stack & Frontend Engineer** with **2 years of professional experience** architecting high-performance, responsive, and scalable web applications using **React.js, Next.js, Node.js, Express.js, JavaScript, and TypeScript**. Proficient in end-to-end full-stack integration, real-time communication systems, GIS network visualization, and complex state management. Skilled in leveraging **AI-assisted development tools (Claude AI, Antigravity, GitHub Copilot)** to accelerate component architecture, optimize complex state logic, and expedite full-stack workflow delivery.

TECHNICAL SKILLS

- **Frontend Technologies:** React.js (React 19), Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS (v4), Material UI (MUI), Ant Design
- **State Management & Validation:** Redux, Redux Toolkit, MobX Store, Formik, Yup, Context API
- **Backend Technologies:** Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO, SignalR, Axios
- **Databases:** MySQL, PostgreSQL, MongoDB
- **AI-Assisted Engineering:** Claude AI, ChatGPT, Gemini, GitHub Copilot, Grok, Cursor, Codex
- **Tools & Version Control:** Git, GitHub, Vite, Postman, Swagger, Stripe, AWS S3
- **Architecture & Methodologies:** Responsive Web Design, Role-Based Access Control (RBAC), UI/UX Principles, Code Quality Standards
- **Soft Skills:** Communication, Team Building, Quick Learner, Ability to Work Under Pressure

PROFESSIONAL EXPERIENCE

Jr. Software Developer | Cmarix Infotech, Ahmedabad

Nov 2025 – Present

Project 1: HSSE - SafeOps Enterprise Management Platform

Tech Stack: React 19, TypeScript, MobX Store, Tailwind CSS v4, MUI Joy, TanStack Table v8, Recharts, SignalR

- Designed, architected, and developed from scratch a comprehensive Health, Safety & Environment (HSE) management platform for the petroleum industry using **React 19, TypeScript, and AI-assisted software engineering practices**.
- Leveraged **Claude AI-powered component architecture** to rapidly generate scalable UI modules, refactor complex state logic, and streamline multi-step form workflows, significantly cutting down development iteration time.
- Architected robust **state management optimization using MobX Store** to handle seamless data flow, auto-saving draft states, and ensuring zero-lag user experience across data-heavy forms.
- Engineered a dynamic **Root Cause Analysis (RCA) Template Builder** and custom questionnaire engine supporting recursive tree node structures, custom conditional validations, and AI-assisted query resolution.
- Constructed interactive **analytics dashboards using Recharts**, featuring KPI summary metrics and cascading multi-site filtering for real-time risk assessment.
- Built **data-dense tables** using **TanStack Table v8** featuring **server/client pagination**, custom sorting, and multi-attribute filters.
- Implemented core CRUD modules, secure login authentication, **action tracking, audit trails, and risk matrix reporting**.
- Integrated real-time communications using **SignalR** and .NET backend, combining modern software engineering standards with key AI capabilities to maximize operational efficiency.

Project 2: Staytheme / HavenKey – Property Booking & Hospitality Platform

Tech Stack: React.js, TypeScript, Redux Toolkit, Node.js, PostgreSQL, Stripe, REST APIs, Tailwind CSS, Socket.IO

- Built a full-stack **multi-portal vacation rental and property booking platform** using **React.js, Node.js, Express.js, and TypeScript**, featuring Admin, Host, and Customer-facing panels.
- Utilized **Gemini and AI assistance** for rapid workflow prototyping, component abstraction, and seamless **Node.js REST API integration**.
- Integrated **Node.js REST APIs, PostgreSQL**, and **Stripe** payment gateway for **secure transactions and automated booking receipts**.
- Implemented **role-based access control (RBAC)**, host management controls, dynamic pricing, and reusable component libraries using **Redux Toolkit**.

Project 3: Autocount – Calculation & Reporting System

Tech Stack: React.js, Redux Toolkit, TypeScript, Formik, Yup

- Engineered an enterprise-grade ERP interface using **React 19, TypeScript, and Vite**, delivering scalable sub-second performance.
- Designed a modular global state structure with **Redux Toolkit** across 40+ slices, optimizing data flow and eliminating state drift across core accounting and HR modules.
- Implemented dynamic, multi-step financial forms using **Formik and Yup** with real-time calculations and robust schema validation.
- Designed role-based route guards to enforce dynamic privilege authorization before route transitions.
- Integrated **ApexCharts and FullCalendar** for interactive financial revenue analytics dashboards and staff roster management.
- Built client-side custom PDF invoice and report generation utilizing **jsPDF and AutoTable**.

React.js Developer | GPSTek, Ahmedabad

Nov 2024 – Aug 2025

- Developed **GIS-based solutions, IP Data Log (IPDR) management**, and network visualization platforms using **React.js**.
- Built a Network GIS solution **integrating interactive maps** with the **QGIS mapping engine**.
- Designed and implemented a planning dashboard featuring a **multi-region planning view with interactive GIS layer management** (add, view, edit).
- Built element detail retrieval with **status tracking (Pending/Completed)** and file attachment handling.
- Developed a **ticketing workflow system with automated issue reporting** and media upload capabilities.
- Created **high-converting, responsive landing pages** emphasizing clean UI/UX across Staging, Qbell, and BBNL server environments.

EDUCATION

B.E. in Information Technology

GEC Modasa (Gujarat Technological University) | CGPA: 8.33 | 2020 – 2024

Higher Secondary (XII - GSHEB)

C.M. Desai High School, Virpur | Percentage: 66.92% | 2020

Secondary School (X - GSEB)

C.M. Desai High School, Virpur | Percentage: 81.50% | 2018
